

AUTIQ AFRICA

Final Scope of Delivery (Web Application Only)

1. Product Definition

Autiq Africa will be delivered as a:

Cloud-based, responsive web application for automotive dealers and workshops across Africa.

Key Characteristics:

- No Android/iOS apps in scope
 - Works in browser on:
 - Desktop
 - Tablet
 - Mobile (technician-optimized UI)
 - SaaS multi-tenant architecture
-

2. UX & Design Requirements

Mandatory Design Principles

- Mobile-first responsive design
 - Large touch-friendly buttons (technician usability)
 - Minimal typing (dropdowns, presets)
 - Clean, premium UI (aligned to branding)
 - Fast-loading pages (<2–3 sec target)
-

3. System Modules (In Scope)

3.1 Authentication & Role-Based Access

- Login / Logout
- Password reset
- Role-based dashboards:
 - Front Desk (Service Consultants) – It can be multiple
 - Technician - It can be multiple
 - Manager – 2 Parts & Service Manager

- Workshop controller
- Accounts (Anyone)
- Parts Interpreter (same like service consultants can be multiple) to Service advisors
- CEO (Head of Dealership)
- Enterprise Admin

Flow: Client -> Service Consultant (Front Desk) -> Workshop controller -> Technician -> Parts Interpreter -> Service Consultant -> Client (if complain) -> Manager

3.2 Enterprise Admin (SaaS Control Panel)

Features:

- Create & onboard new client (dealer)
- Configure modules per client (Service & Paint & Panel module)
- Store client details
- Send onboarding email after setup
- View all clients on platform
- Role based access management
- Actions:
 - Activate
 - Deactivate
 - Archive
 - Delete
- View client login activity:
 - Last login date
 - Account age

Data Exit Feature:

- Export full client data:
 - CSV (structured)
 - Email-ready format
 - Trigger on client exit
-

3.3 Customer & Vehicle Management

- Create customer
 - Search customer:
 - Name
 - Phone
 - Registration number
 - Store:
 - Contact details
 - Communication preference
 - Vehicle management:
 - VIN
 - Mileage
 - Type (private/fleet/insurance)
-

3.4 Job Management (Core Workflow)

Job Lifecycle:

1. Create job - Service Consultant
 2. Add intake details – Service Consultant
 3. Capture photos/videos - Technician
 4. Generate quote – Parts Interpreter
 5. Send for approval - Client
 6. Assign to department – Service Consultant to Workshop to Technician
 7. Execute work - Technician
 8. Payment – Service consultant & Accounts
 9. Delivery/Collection - Service consultant to Client
-

3.5 Department Boards (Kanban UI) – Service Consultant, Workshop & Parts Interpreter

- Drag-and-drop job cards
- Status columns:
 - New
 - Accepted

- In Progress
 - Waiting Approval
 - Waiting Parts
 - Payment
 - Completed
-

3.6 Technician Work Screen (Mobile-Optimized Web)

Features:

- Optimized for mobile browser use
 - Checklist-based workflow
 - Buttons:
 - Add note upto 500 words
 - Upload photo/video
 - Raise issue – Color system of Red(Critical), Amber(Should be done upto 5000 km), Green (Good to go)
 - Save progress
-

Part Replacement Feature

Technician can:

- Mark component as failed
 - Upload:
 - Failed component image
 - Replaced component image
 - Add notes & cost impact
-

3.7 Service Module Configuration

Enterprise/Admin can:

- Define service templates (Spray & Paint, Service Modules)
- Configure:
 - Checklist items
 - Standard pricing (Send to insurance companies)

- Duration

3.8 Quote & Approval System

- Line-item quotes
- Send via:
 - WhatsApp
 - Email
 - Secure web link
- Customer actions:
 - Approve
 - Reject
 - Sign digitally

3.9 Additional Work Approval

- Raise new issue
- Attach media
- Send for approval
- Auto reminders if pending

3.10 Customer Journey Portal (Web Link)

Accessible via browser (no login)

Features:

- Job progress tracking
- Photo/video gallery
- Approvals
- Payment summary
- Collection/delivery selection

3.12 Accounts & Payments

- Track payments
- Generate invoices & print

- Payment methods:
 - Cash
 - Bank
 - Mobile money
 - Card

Status Colors:

-  Overdue
-  Due today
-  Paid

3.13 Calendar & Job Capacity (Front Desk)

- Appointment calendar
- Daily job limit setting

Rule:

- If limit exceeded → highlight in  Red

3.14 Notifications System

Triggers:

- Quote sent
- Approval pending
- Work started
- Job completed
- Payment reminder

Channels:

- WhatsApp
- Email

3.15 Reports & Analytics (Access to only Accounts, CEO & Enterprise Admin)

- Jobs created/completed
- Revenue
- Technician performance

- Pending approvals/payments

Export:

- PDF
 - Excel
-

3.16 Search & History

- Global search:
 - Workshop
 - Customer
 - Vehicle
 - Job
 - Full history view:
 - Jobs
 - Quotes
 - Payments
 - Media
-

4. Multi-Currency Support

- Configurable per client by Enterprise Admin (USD, RAND, etc)
 - Supports Southern African currencies
 - Used in:
 - Quotes
 - Payments
 - Reports
-

5. Responsiveness Requirements

The system must:

Desktop:

- Full dashboard experience

Tablet:

- Optimized layouts (grid + touch)

Mobile:

- Technician-first design
 - Single-column layouts
 - Large buttons
 - Fast camera upload
-

6. 🧩 Technical Scope**Frontend:**

- Responsive React / Next.js app

Backend:

- Node.js API

Database:

- PostgreSQL (multi-tenant)

Storage:

- Cloud media storage (images/videos)
-

7. 🚀 Out of Scope (Explicit)

To avoid ambiguity:

- ✗ Native mobile apps (iOS/Android)
 - ✗ Offline mode
 - ✗ Hardware integrations (OBD devices, etc.)
 - ✗ AI features (unless added later phase)
-

8. 📦 Deliverables

- Fully functional responsive web app
 - Admin panel (enterprise + dealer)
 - Backend APIs
 - Database schema
 - Deployment-ready system
 - Documentation
-

9. Acceptance Criteria

System is considered complete when:

- Entire job lifecycle works via web browser
- Technician can fully operate using mobile browser
- Customers can approve via link
- Enterprise admin can manage clients
- Reports and exports work correctly
